PREFACE

IN compliance with the request of a deputation of Yacht Owners and others interested in yachting, the Committee of Lloyd's Register of Shipping determined in 1877 to provide a Register for the faithful and accurate Registration of yachts and to adopt Rules and Regulations for the Classification of this description of vessel.

The Register of Yachts, which is printed solely for the use of Subscribers, was first issued in 1878, and has since been issued annually, except during the war years 1916 to 1918 and 1940 to 1946. Two supplements containing additions and corrections are usually issued during the year.

The Register contains the names, details and characters of all yachts classed by the Society, together with the particulars of other British and overseas yachts so far as known, which are considered to be of interest to the yachting fraternity in general, and much other information of interest to yachtsmen.

Of yachts of the United States, details of only the larger vessels and those holding the Society's Classification are included in this volume, as a separate Register containing a list of yachts of the United States and Canada is published annually from the Society's Office at 17, Battery Place, New York. Canadian yachts in general are listed in both Registers.

Whilst Subscribers are entitled to have full particulars of their yachts entered in the Register, irrespective of size, it is the practice to restrict in general the entries to sailing yachts of a sail area not less than 300 sq. feet and to motor yachts 25 feet and over on the water line.

Owing, however, to the increasing popularity of certain Classes of small craft which are below the size normally accepted for full entry, the section dealing with the Sail Numbers of racing yachts has been extended to include the numbers, names and the names of the owners of yachts holding valid Certificates of Rating in the various British National Classes. Similar particulars are given as far as possible for the 5-Metre and Dragon Class yachts overseas, as supplied by the respective National Authorities.

The R.O.R.C. ratings assigned to certain yachts in the 1951 Register have been calculated with an allowance *for* the propeller (if fitted); and for the first time the Time Correction Factors (T.C.F.) are shown. This information is supplied by the Royal Ocean Racing Club.

A further innovation in this Register is a list of British Regatta Fixtures for the 1951 season.

Information for the Register is obtained from the Society's Surveyors, The Registrar General of Shipping and Seamen, Yacht Owners, Builders, Designers and from various other sources. Upon the request of the responsible parties, the Society undertakes the survey of yachts during construction or of yachts already built, with a view to Classification being assigned by the Committee of Lloyd's Register. Particulars may be obtained upon application to the Head Office, or to any of the Society's Surveyors.

It would be appreciated if Yachtsmen, and others interested in the book, would assist the Committee in making it as complete and accurate as possible by furnishing particulars of Yachts not already recorded in the Register, giving early intimation of any changes of ownership, forwarding any other information of interest to the compilers, and by replying promptly to any enquiry which may be addressed to them by the Society. Although the book is published in May, it is necessary for the work to be placed in the printers' hands by the beginning of January, the Register Section being passed for press alphabetically from that time onward until completion.

KEY TO THE REGISTER

KEY TO LLOYD'S REGISTER OF YACHTS.

SYMBOLS OF CLASSIFICATION, COLUMNS 10, 11 & 12.

(All Abbreviations employed in the Register are explained in the Alphabetical Key, page 27.)

100A Character of Yachts built of Steel or Iron in accordance with or equal to the Society's Rules and Tables.

A Without a numeral prefixed, character assigned to Steel Yachts not built in accordance with the requirements of the Society's Rules, but found to be efficient.

A Without a numeral prefixed, character assigned to Iron and Steel Yachts already built to which the Society's Rules do not apply.

A Character of Wood or Composite built Yachts of the first class. The figures prefixed to the character thus, 18 A, 12 A, indicate the term of years for which the Vessel is at present classed. Where this term follows the sign ✠ (indicating construction under the Special Survey of the Society's Surveyors) it commences at the date of build shown in Col. 7. Figures placed within parentheses thus, (17)A, C(11), indicate the expired term of years — originally if on the first line, and on continuation or restoration if on lower lines.

A Without a term of years indicates that the Yacht, though not built according to the Society's Rules, is considered worthy of the class assigned.

R Character of Yachts built in accordance with the Rules for Yachts of the International Rating Classes both as regards scantlings and equipment. The figures prefixed to the character thus, 16 R, 14 R, in the case of Wood and Composite Yachts, indicate the term of years for which the Yacht is at present classed.

1 The figure 1 after a character signifies that the Yacht is well and efficiently equipped (*see* Equipment Tables of the Society's Rules for Yachts).

A line thus — after the letter A, A or A signifies that the equipment is *not* in accordance with the Society's Rules.

In the case of Yachts classed R, the figure 1 for equipment is not employed, the equipment being required in these cases to be in accordance with the Rules for Yachts of the International Rating Classes before the class is assigned.

† Prefixed to the class of a Yacht indicates that she is also classed in the Register Book for Merchant Ships, and that the scantlings are equal to the requirements of the Society's Rules for the same.

The figures under a Character denote the date when the Yacht was last Surveyed by the Society's Surveyors.

When the port and date of Survey only appear, without the Yacht's Character, the Character has expired or been withdrawn because a Survey prescribed in the Society's Rules has not been held, or on account of non-payment of fees.

✠ This sign before a Character thus, ✠100A1, denotes that the Yacht has been built under the Special Survey of the Society's Surveyors.

✠ This sign before a classification record of Machinery thus ✠LMC✠NE&B indicates that the Engines and Boilers or both (according to the record which follows) have been built under the Special Survey of the Society's Surveyors.

SYMBOLS OF CLASSIFICATION, COLUMNS 10, 11 & 12—*continued.*

—— 3,51 A black line with date underneath indicates that the Yacht's Character was expunged from the Society's Register of Yachts at the date mentioned because, on account of reported defects, the Yacht was not entitled to a Character.

—— 3,51 A red line with date underneath indicates that the Yacht's Character was expunged from the Society's Register of Yachts at the date mentioned because, on account of non-compliance with the Society's Rules as regards Surveys, the Yacht was not entitled to retain her Character therein.

... 3,51 This sign with date underneath indicates that the Yacht's class was withdrawn from the Society's Register of Yachts at Owner's request.

When the eleventh and twelfth Columns are left blank, the Yacht has never been Classed in the Society's Register of Yachts.

EXPLANATION OF RECORDS IN THE REGISTER OF YACHTS.

Tonnage (column 4). Thames Measurement Tonnage is an approximate representation of the internal capacity of a yacht derived from a system of measurement adopted by the Royal Thames Yacht Club in 1854. The rule for computing the Thames Measurement tonnage is as follows:—From the length (measured from the fore side of stem to the after side of sternpost on deck) deduct the breadth, multiply this result by the breadth, and that product by the half breadth, and divide by ninety-four. This tonnage appears in the Register in the case of every Yacht, where these dimensions are known, and is printed below the official tonnages where these tonnages are given.

In the cases of Yachts which are officially registered, the official registered tonnage measured according to the law of the country to which the Yacht belongs is recorded in type like that shown at the side hereof. } 204·51 (Net) 546·65 (Gross)

When the tonnages are given in italics, they are not those assigned by the country to which the yacht now belongs. } *204·51* (Net) *546·65* (Gross)

Dimensions (column 5). The dimensions which are printed on the top line are given in feet and tenths of a foot and are those employed for calculating Thames Measurement tonnage. In the case of yachts classed by Lloyd's Register, these are obtained from the Society's Surveyor's First Entry Report of Survey; where yachts are not classed by the Society, but are officially registered, the dimensions are obtained from the vessel's Certificate of Registry. In other cases the dimensions are as given on returns received from owners, builders, etc.

The **length** entered on the top line is the length measured from the fore side of stem to the after side of sternpost on the range of the upper deck, except in the case of unclassed yachts which are officially registered as British vessels, when the registered length is recorded.

The length entered on the second line is the length over all.

The length entered on the third line is the length on the water line.

The **breadth** recorded is the extreme breadth.

The **depth** is taken from the top of floors to top of upper deck beams amidships.

The **headroom** is the maximum clear space from top of floor or cabin deck to underside of beams at upper deck or coach roof *in way of Owner's accommodation* (*saloon*).

The **draft** is the maximum draft to bottom of keel.

The **sail area** recorded is the area of the working sails and is given in square feet.

EXPLANATION OF RECORDS IN THE REGISTER OF YACHTS—*continued.*

Date of Build (column 7). The date of build recorded in the Register for yachts built previous to 1903 under the special survey of the Society's Surveyors, is the date when the yacht was launched. For yachts built from 1903-1924 the last date of survey for first entry of classification is recorded when such survey was completed within six months of the date of launching, but when the first entry survey was not completed within that period, six months later than the date of launching is then recorded as the date of build. For yachts built subsequent to 1924 the date of completion of the special survey is taken as the date of build.

The date of build of steam engines and boilers is only recorded where the same differs from the date of build of the yacht, and, in these cases, the date appears in column 8.

Internal Combustion Engines (column 8)—

Oil Engine indicates an internal combustion engine using heavy oil as fuel.

Petrol Motor indicates an internal combustion engine using petrol or other highly volatile oils as fuel.

Paraffin Motor indicates an internal combustion engine using paraffin oil as fuel although started up on petrol.

Nominal Horse Power (column 8). The formulæ from which the Nominal Horse Powers of Steam Reciprocating Engines are calculated are :—

1. In cases of yachts in which the particulars of boiler pressures and surfaces are known :—

$$NHP=\frac{P+340}{1000}\left(\frac{D^2\sqrt{S}}{100}+\frac{H}{15}\right)$$ where the boiler pressure is below 160lb.

$$NHP=\frac{P+590}{1500}\left(\frac{D^2\sqrt{S}}{100}+\frac{H}{15}\right)$$ where the boiler pressure is 160lb or above.

For determining the Nominal Horse Power of Steam Turbine Engines $\frac{SHP}{6}$ is to be substituted in the above formulæ for $\frac{D^2\sqrt{S}}{100}$ where SHP is the total Shaft Horse Power.

If the boilers are fitted with Forced Draught or Induced Draught appliances, then $\frac{H}{12}$ is taken instead of $\frac{H}{15}$.

2. In cases where particulars of the boiler pressures and heating surfaces are not known :—

$$NHP=\frac{D^2\sqrt{S}}{100}$$ for Triple and Quadruple Expansion Engines.

$$NHP=\frac{D^2\sqrt{S}}{120}$$ for Compound Engines.

$$NHP=\frac{D^2\sqrt{S}}{130}$$ for Single Engines.

In the above Rules, D = diameter of L.P. Cylinder in inches.
S = Stroke in inches.
H = Heating surface in square feet.
P = Working pressure in lb per square inch.

In vessels fitted with Heavy Oil Engines :—

$$NHP=\frac{C\times N\times D^2}{\frac{S}{D}+50}$$

where NHP=the Nominal Horse Power.
N=the number of power cylinders.
D=the diameter of the power cylinders in inches.
S=the stroke of the piston in inches. In the case of the opposed piston type of engines S is half the combined stroke of the pistons.
C= 5 for Engines of the 4 S.C.S.A. type.
=10 for Engines of the 4 S.C.D.A. type
= 9 for Engines of the 2 S.C.S.A. type.
=18 for Engines of the 2 S.C.D.A. type.
=16 for Engines of the 2 S.C.S.A. opposed piston type.

In vessels fitted with Petrol or Paraffin engines :—

$NHP=\frac{BHP}{3{\cdot}5}$, where BHP is the Brake Horse Power at full power.

The **R.O.R.C. Ratings and Time Correction Factors** (columns 9 & 10) are furnished by the Royal Ocean Racing Club, and have been calculated with an allowance for the propeller (if fitted).

An asterisk * (column 9) before an Owner's name indicates that he has obtained the Board of Trade Certificate of competency as Master.

INDEX TO DISTINGUISHING FLAGS OF YACHTSMEN

INDEX TO DISTINGUISHING FLAGS.

To facilitate reference at sea, the Distinguishing Flags have been arranged according to colours :—
1st, Red ; 2nd, Yellow ; 3rd, Dark Blue ; 4th, Green ; 5th, Light Blue ; 6th, Chocolate ; 7th, Purple ; 8th, Black.
Combinations of two or more colours generally follow the principal colour in the order above.
In Flags with vertical designs the colour next the mast is the principal colour ; in horizontal designs, the top colour.

INDEX DES PAVILLONS PARTICULIERS.

Afin de faciliter l'identification en mer, les pavillons particuliers ont été groupés d'après leur couleur dans l'ordre suivant:—
(1) rouge ; (2) jaune ; (3) bleu foncé ; (4) vert ; (5) bleu clair ; (6) chocolat ; (7) pourpre ; (8) noir.
Les combinaisons de deux couleurs ou plus suivent généralement les couleurs principales dans l'ordre cidessus.
Dans les pavillons à bandes de couleur verticales, la couleur à côté du mât est la couleur principale ; dans ceux à bandes horizontales, la couleur supérieure.

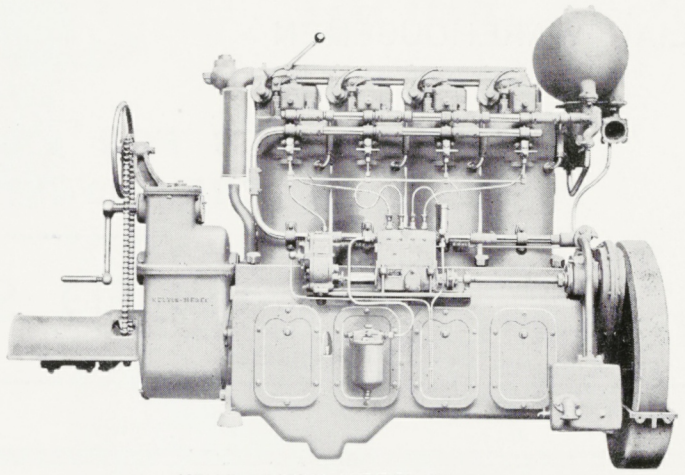
KELVIN

MARINE ENGINES

Diesel and Petrol / Paraffin

FROM 7½ H.P. TO 132 H.P.



KELVIN-DIESEL MODEL K4 88 H.P.

The choice of Kelvin marine engines for installation in fishing boats, commercial and official craft, in such numbers is attributable to their outstanding reliability, efficiency, and unequalled endurance.

Yacht owners down the years have realised that these qualities are coupled to a very high degree of finish, advanced design, and freedom from noise, vibration and smell. As a result, Kelvin marine engines have been installed in over 7,000 yachts and pleasure craft.

KELVIN-RICARDO paraffin and petrol marine engines (poppet valve) are made in four models from 7½ h.p. to 30 h.p.

KELVIN-DIESEL marine engines are full diesel engines of the four cycle, compression ignition, solid injection type, and comply with the requirements of Lloyd's and The Board of Trade. They are made in eight models from 22 h.p. to 132 h.p. The 88 h.p. and 132 h.p. models can be supplied with reverse and reduction gear combined in a single unit at the forward end of the engine, a method of construction with many advantages.

PRICES cover complete marine equipment, including shaft, stuffing boxes, propeller, fuel tanks and all water connections and skin fittings. This is an important point and should be remembered when engine prices are being compared.

AEC SOUTHALL

9·6 LITRE *Marine* OIL ENGINES

The Port of London launch illustrated is called upon to operate in all weathers and under most arduous conditions, and for this reason a handed pair of A.E.C. engines were specified—the world renowned units for continuous trouble free service. Their outstanding design incorporates fresh water cooling and dry sump lubrication, and they develop 100 b.h.p. at 1500 r.p.m. continuous rating.

Other power units designed especially for marine use by the large A.E.C. organisation are their 9·6 litre Ship's Auxiliary engines, which are fitted with complete electrical equipment for remote control and have special arrangements to ensure immediate starting from cold.

Built to Lloyd's survey, B.O.T. certificates are supplied where required. Please ask for full details.

. . . . . **read by yachtsmen everywhere, at home and abroad.**

The reason is that it gives you just what you want to read about. If you are a cruising man you will find the very best of cruising yarns, designs and descriptions of boats, gear and "gadgets", helpful articles in season on fitting-out, pilotage and navigation and laying-up.

SENACA'S monthly comments on Ocean Racing are an outstanding feature, the result of first-hand experience; plans of sharpies, dinghies and small cruising yachts which the amateur can build himself, keep pace with today's trends in yachting. Class racing is also thoroughly covered, and news of the doings of the local clubs is a regular feature.

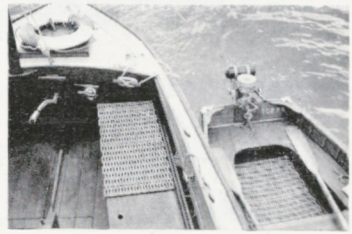
NUWAY

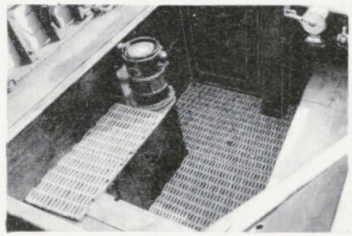
non-slip matting

for PLEASURE CRAFT

- Ensures safety aboard—it is non-slip whether wet or dry.
- Provides increased comfort—absorbs engine vibration and is soft, silent and dry to walk on.
- Does not cause rot—it neither holds water nor excludes air.
- Protects much used surfaces—invaluable for seat steps, hatch covers, etc.
- Promotes cleanliness—prevents the spread of sand and dries the feet.
- Nuway is inexpensive and has a long life—guaranteed for 10 years.

NUWAY matting is of fibred rubber link construction and for marine use aboard smaller craft it is woven on cadmium-copper wire to resist salt-water attack.





Use NUWAY in cabins, wheelhouses, cockpit, companionways, steps, passages, galley, engine room, in dinghy or on seat steps.

NUWAY can be quickly supplied in any shape or size.
